

BREATHE WITH CONFIDENCE

Air Quality Excellence certification by CaptiveAire recognizes facilities that maintain exceptional indoor air quality. High volumes of outdoor air have been shown to reduce the spread of viruses, improve productivity and concentration, and promote a healthier environment.

The Six Point System

Ventilation systems in each Air Quality Excellence certified facility are carefully designed, installed, and tested to verify that indoor air quality meets stringent parameters. Facilities must meet six qualifications to gain certification.

1. The building has a positive building balance.
2. All ventilation equipment contains direct drive (not belt drive) motors.
3. All ventilation equipment is connected to CASLink and an active connection is present at all times.
4. CaptiveAire equipment handles all outside air entering the building.
5. CASService's System Design Verification confirms upon installation that design airflows are met, there are no installation concerns, and supply air velocity is acceptable (no drafts).
6. The building has at minimum 1.5x the ASHRAE 62.1 standard (Ventilation for Acceptable Indoor Air Quality).

Achieve Air Quality Excellence

Earn certification through CaptiveAire and receive a front door decal and a plaque for your lobby. Your patrons will breathe in confidence knowing the air they breathe is healthy and fresh.
