

CORE FIRE PROTECTION

# FIRE OUT. COOK ON.

A fire system activation shouldn't shut your kitchen down for days. Traditional systems leave behind chemical messes, costly tank refills, and long delays while you wait for recertification. All of that means lost business and added stress.

## THE SMART SOLUTION

If your restaurant already has a sprinkler system, the CORE Fire Suppression is a smarter solution to kitchen fire suppression. CORE Fire Suppression is a water-based fire system for Type-1 Kitchen Ventilation Hoods and has been tested to be superior at extinguishing grease fires than traditional chemicals. The water is fed from your current utilities and provides an infinite suppression supply. With only soapy water instead of caustic chemicals, cleanup after an activation is quick and easy, avoiding damage to your appliances.

If there's no fire or activation damage, you can be back in operation within hours. No need to close the doors and lose business. CORE Fire Suppression is the smart financial choice for prudent restaurateurs.
