

CORE & TANK Nozzle Part Number Update

FTB22-1001

Fire System Technical Bulletin

April 6th, 2022

Background:

The part numbers of the CORE and TANK nozzles have been updated to simpler nomenclature to assist with identification.

This change is effective 4/5/2022, however production products may have old or new nozzle nomenclature for some time.

Details:

Both the part number in the Bill of Materials and the part number stamped on the nozzles will be updated to the new part numbers listed below.

Old Part #	New Part #	Description
3070-3/8H-10-SS	OL-F	Female Overlapping Nozzle
3070-3/8HH-10-SS	OL-M	Male Overlapping Nozzle
3070-3/8H-00120-SS	WK-F	Female CORE Large Wok Nozzle
1/4TT+TP1530+CP1325	CR-M	Male CORE Riser Nozzle
1/4TT+TG-4.3W	CPL-M	Male CORE Plenum Nozzle
3/8GA-5.6W	ESP-F	Female ESP Self-Cleaning Nozzle

The text on the nozzles has been inverted to be more easily read when installed upside down for a downward facing drop.

Both old and new nozzle part numbers have been updated within relevant listing reports and Owner's Manuals.

Existing drawings with old part numbers referenced WILL NOT need to be updated to the newer version unless the new nomenclature is desired. The mechanical design of the nozzle is unchanged. The parts are functionally identical.
